### Fixed Income Update for March 2014

#### Key Market Highlights:

- During the month we saw yields fall across various debt asset classes. While gilt and T-bill yields fell by 10-15 bps across the curve, CD rates exhibited sharp volatility. 3Months CD rates rose to 10.15% levels mid-March before falling all the way to below 9% levels towards end of March. The last day of March saw sharp volatility as banks and mutual funds scrambled for funds.
- INR appreciated during the month and closed at 59.89 from 61.75 in the previous month. Large FII in flows were the main reason for rupee's strength. During the month FIIs were net buyers of domestic debt to the tune of ₹ 10,000 crore approx. In equities they were net buyers to the tune of more than ₹ 20,000 crore.
- The new ten year benchmark 8.83% GOI 2023 closed at 8.80%, 6 bps lower than previous month end. Lack of supply, year-end buying and rupee strength were the main reasons.
- The ten year AAA Corporate bond benchmark closed at 9.62%, 5 bps lower than previous month. The five year AAA corporate bond benchmark also closed at 9.62%, down more than 15 bps.
- 1 year CD rates fell sharply to close at 9.20, 58 bps lower than previous month. 1 year T-bill rate also fell 18 bps to 8.77%.
- February WPI data release came at 4.68% y-o-y vs. 5.05% in previous month. CPI for February also came in lower at 8.10% compared to 8.79% in previous month. Core CPI however continues to remain sticky and above 8%.
- Jan industrial production (IIP) growth came in at 0.1% yoy reflecting continued tepid activity.
- Liquidity deficit was higher during the month at ₹ 1,38,000 crore average as compared to ₹ 1,16,000 crore average for the previous month combined for daily LAF, term LAF and MSF. Overnight rates remained volatile in the range of 8-9.25%. The last trading day of the month saw overnight rates shooting upto 17%. RBI introduced additional liquidity through the term repo facility in the range of ₹ 20,000 crore to 30,000 crore on various days as overnight rates went to the higher end of the band.

- RBI released the borrowing calendar for gilts, T- bills and SDLs. The gross borrowing for first half of FY 15 through dated g-secs is pegged at ₹ 3.68 lakh crore which is about 61% of the total budget estimates for full year. Borrowing through SDLs is estimated to be in the range of 45000 crore to 50000 crore and through T-bills is estimated to be ₹ 1,91,000 crore in the quarter April to June 2014.
- In its Monetary Policy Review held on 1st April 2014, RBI kept key rates unchanged. However RBI cut the daily overnight LAF facility to 0.25% of NDTL from 0.5% earlier and that of 7 and 14 day term repo facilities have been increased to 0.75% of NDTL from 0.5% indicating the Central Bank's intention to further develop the term repo market and reduce banks reliance on overnight guaranteed funding.

#### Outlook:

- We expect long end gilt yields to go up as supply resumes in the new financial year. The ten year G-sec benchmark is expected to trade in a band of 8.80 to 9.25 during the month with upward bias.
- The five year AAA PSU corporate bond benchmark is expected to trade in a range of 9.50 to 9.90%.
- Banking system liquidity deficit is expected to improve and be in range of ₹ 1,00,000 lakh crore for the month.
- Short term money market yields are expected to remain volatile on account of tight liquidity and changes made in daily and term LAF repo facility by RBI. Banks CD issuance can put upward pressure on rates, however if liquidity eases from current levels it may lead to softening of CD rates. T bill yields are also likely to go up as FPIs (Foreign Portfolio Investors) are barred from further investments in t- bills and heavy supply.
- Inflation may have bottomed out and is expected to remain around similar levels or higher for March 2014.

### Review of Equity Market for the Month of March 2014

The BSE Sensex and the Nifty increased sharply during the month by 5.9% and 6.8%, respectively while CNX Mid-cap index also rallied by 10.3% during this period.

The markets are positioning themselves for a stable government post elections and may remain volatile based on news flow till the elections. Corporates are currently in a wait and watch mode waiting for election results. However, given the initiatives of the current Government in expediting clearances and unclogging stuck-up projects, we do expect economic growth to gather some momentum in FY15, especially in the second half of the year. One note of caution stems from the possibility of an "El Nino" this year, which could impact rainfall and hence agriculture. This comes on the back of unseasonal rains in several parts of North and Central India which has damaged crops though the extent remains unclear.

#### PERFORMANCE AS ON MARCH 31, 2014\*

	Index	1 Month (%)	3 Months (%)	6 Months (%)	1 Year (%)
<b>Broad Markets</b>					
CNX Nifty Index	6704	6.81	6.35	16.89	17.83

S&P BSE PSU	6355	15.23	7.53	16.68	-1.94
S&P BSE Teck	4905	-6.77	-2.90	10.54	25.52
S&P BSE HC	10084	-6.98	1.18	6.55	25.71

\* Performance for less than one year period are absolute returns and more than one year are compounded annualized returns.

Source - MFPI Explorer

During the month, FIIs continued to remain buyers of both debt (net inflow of USD 1.6 Billion) and equities (net inflow USD 3.7 Billion). The FIIs have invested over USD 13.6 Billion in Indian equity in FY 14, of which 2nd half of FY14 witnessed over USD 10.7 Billion (77% of total). However, domestic institutions (mutual funds) continued to be net sellers (USD 637 million), maintaining this streak since September.

After seven months of positive growth, exports in Feb fell 3.7% YoY to USD 25.7 Billion. However, continued contraction in imports by 17.1%YoY in Feb resulted in India's trade deficit narrowing to USD 8.1 Billion. Due to a compression in the trade deficit, India's 3QFY14 CAD narrowed to USD 4.1 Billion (-0.8% of GDP) vs. USD 5.2 Billion in 2Q and a high of USD 21.8 Billion in 1QFY14. Continued compression in CAD coupled with a pick-up in capital flows (FII Equity flows), has led to INR appreciating by 3% against USD during March.

Mixed trend in manufacturing was seen in March, where India's Manufacturing PMI moderated to 51.3 (-1.2pts) in March from a ~1 year high of 52.5 in Feb while core infra production, at a 5-month high, rose 4.5% YoY in Feb compared to 1.6% last month. February CPI came in at 8.1% while WPI was at 4.7%, primarily led by lower prices of vegetables. IIP for January came in at 0.1% as against a degrowth of 0.6% in December 2013.

In terms of earnings for the BSE Sensex, we expect Q4FY14 to see an earnings growth of 13%-14%, the third straight quarter of double digit growth and operating margins at a 13-quarter high. For FY15, current expectations are for an earnings growth of 13%-15%, with positive revisions likely if the outcome of elections is in line with expectations. The markets are currently trading at a P/E of slightly over 15 on FY15E earnings making it reasonably valued but with an upside potential of 10%-15% once a stable Government is in place. On a bottom-up basis however, we do see stock-specific opportunities that have the potential to deliver significantly better than market returns.

In most of our Funds, we are overweight (relative to respective benchmarks) on I.T. and Autos. We are underweight (relative to respective benchmarks) on Consumer Goods, Metals, Energy.

During the month, we bought or added to our positions in Tata Communications, Siemens, Wockhardt, Jain Irrigation and DCM Shriram. During the month, we sold or reduced our positions in Ashok Leyland, NMDC, Zee Entertainment, Himatsingka Seide, and Finolex Industries.

# Principal SMART Equity Fund (An open-ended equity scheme)

## FUND FEATURES

**OAAUM** (For the period January to March 2014):

₹ 51.56 crore

**NAV per unit** (As on March 31, 2014)

	Direct Plan	Regular Plan
Growth Plan :	₹ 13.37	₹ 13.23
Dividend Plan :	₹ 13.37	₹ 13.23

## INVESTMENT OBJECTIVE

The primary objective of the scheme is to seek to generate long term capital appreciation with relatively lower volatility through systematic allocation of funds into equity; and in debt /money market instruments for defensive purposes. The Scheme will decide on allocation of funds into equity assets based on equity market Price Earning Ratio (PE Ratio) levels. When the markets become expensive in terms of 'Price to Earnings' Ratio'; the Scheme will reduce its allocation to equities and move assets into debt and/or money market instruments and vice versa.

- Resident Individuals, HUF, BOI, AOP, Domestic companies, Non Resident Individuals ('NRIs'), Foreign Institutional Investor ('FIs') and Qualified Foreign Investors ('QFI'). It is assumed that the units are held as capital assets by the investors.
- Plus applicable surcharge [refer note 9], if any, and Education Cess at the rate of 2% on income-tax and surcharge and Secondary and Higher Education cess at the rate of 1% on income-tax and surcharge.
- Securities Transaction Tax ('STT') is applicable in respect of purchase/ sale of units of Equity-oriented funds ('EOFs') on a recognised stock exchange and redemption of EOFs by the mutual fund. Purchase/ sale/ redemption of units other than EOFs are not subject to STT.
- Non-resident investors / FIs / QFIs shall be entitled to be governed by provisions of the applicable Tax Treaty, which India has entered with the country of residence of the non-resident investor, if that is more beneficial than the provisions of the Income-tax Act, 1961 ('the Act'), subject to certain conditions. As per section 90(4) of the Act, a non-resident shall not be entitled to claim treaty benefits, unless the non-resident obtains a Tax Residency Certificate ('TRC') from their home country, containing such particulars as may be prescribed. The Central Board of Direct Taxes has issued a notification dated 17 September, 2012, wherein certain particulars have been prescribed in this regard.
- As per section 112 of the Act (as amended by the Finance Act, 2012), long-term capital gains in case of non-residents would be taxable @ 10% on transfer of capital assets, being unlisted securities, computed without giving effect to first & second proviso to section 48 i.e. without taking benefit of foreign currency fluctuation and indexation benefit.
- Section 196D of the Act provides that no tax is required to be withheld for payment to a FI in respect of capital gains arising on transfer of units.
- As per provisions of Section 206AA of the Act, if there is default on the part of a non-resident investor (entitled to receive redemption proceeds from the Mutual Fund on which tax is deductible under Chapter XVII of the Act) to provide its Permanent Account Number ('PAN'), the tax shall be deducted at higher of the following rates: i) rates specified in relevant provisions of the Act; or ii) rate or rates in force; or iii) rate of 20%.
- "Infrastructure debt fund" means a infrastructure debt fund as defined in clause 1 of the regulation 49L of the Securities and Exchange Board of India (Mutual Funds) Regulations, 1996. As per clause 1 of regulation 49L, an 'infrastructure debt fund scheme' would mean, a scheme which invests primarily (minimum 90% of scheme assets) in debt securities or securitized debt instrument of infrastructure companies or infrastructure capital companies or infrastructure projects or special purpose vehicles, etc or other permissible assets in accordance with these regulations or bank loans in respect of completed and revenue generating projects of infrastructure companies or projects or special purpose vehicles.

# Understanding Ratios & Risk Measures

➤ **STANDARD DEVIATION** - Is the average deviation from the mean returns. It is an indication of volatility i.e. deviation from mean returns. Lower the better.

- For instance a scheme that has a consistent four-year return of 3% would have a mean or average of 3%. The standard deviation for this scheme would then be zero because the scheme's return in any given year does not differ from its four-year mean of 3%.
- On the other hand, a scheme that in each of the last four years returned -5%, 17%, 2% and 30% will have a mean return of 11%. The scheme will also exhibit a high standard deviation because each year the return of the scheme differs from the mean return. This scheme is therefore riskier because it fluctuates widely between negative and positive returns within a short period.

**Calculation** = Square Root of Variance. Where Variance is the average of the squared deviations from mean returns.

➤ **BETA** - Can be interpreted as percentage change in price of a scheme for every one percentage change in the market benchmark. For example if a scheme's beta is 1.1 and the market is expected to go up/down by 10% then the scheme will move up/down by 11%.

**Calculation** = Covariance of Market and Scheme's Returns Divided by Variance of the Market. Where Covariance is the Deviation of Mean Returns of Market multiplied by Deviation of Mean Returns of the scheme.

➤ **JENSEN'S ALPHA** - Gives the average return of the portfolio over and above the risk free rate and market determined return. This is the addition by the fund manager over and above the market return and hence higher the better.

**Calculation** = Portfolio Return - (Risk Free Rate of Return + beta [market return - Risk Free Rate of Return]).

➤ **SHARPE** - Gives the returns per unit of risk. i.e. for every 1 unit of risk what is the returns of the scheme. For this purpose risk is defined as standard deviation of the scheme. Higher the Sharpe, the better.

It signifies that scheme with a higher sharpe ratio generates returns taking lesser risk. In other words, the scheme is less volatile and yet generating good returns. Thus, given same returns, the scheme with a higher Sharpe ratio offers a better avenue for investing.

**Calculation** = Average Scheme Return - Risk Free Rate of Return ÷ Standard Deviation of the Scheme.

➤ **PORTFOLIO TURNOVER** - Portfolio turnover is a measure of how actively a fund manager trades the portfolio of your scheme. Expressed in percentage or number of times, the inverse of a scheme's turnover ratio is the average holding period for a security in that scheme. If a scheme has a 20 per cent turnover ratio, it would suggest that on average that scheme will hold a security for five years before selling it. A scheme with a 200 per cent turnover ratio will change its portfolio in six months or in other words, replace the entire holdings in its portfolio with new stocks in six months.

**Calculation** = Lower of sales or purchases divided by average AUM for last rolling 12 months.

++ **ICRA** has assigned credit risk rating of [ICRA]A1+mfs to Principal Cash Management Fund. The rating is the highest-credit-quality short-term rating assigned by ICRA to debt funds. It has also assigned the credit risk rating of [ICRA] AAAmfs to Principal Debt Opportunities Fund - Conservative Plan. The rating is the highest-credit-quality long term rating assigned by ICRA to debt funds. Rating methodology used by ICRA is based on evaluating the inherent credit quality of the mutual funds portfolio. As a measure of the credit quality of a debt fund's assets, ICRA uses the concept of "credit scores", based on ICRA's assessment of credit risk associated with each exposure of the portfolio taking into account its maturity. To quantify the credit risk scores, ICRA uses its database of historical default rates for various rating categories for various maturity buckets. The credit risk ratings incorporate ICRA's assessment of a debt fund's published investment objectives and policies, its management characteristics, and the creditworthiness of its investment portfolio. ICRA reviews relevant fund information on an ongoing basis to support its published rating opinions. If the portfolio credit score meets the benchmark of the assigned rating during the review, the rating is retained. In an event that the benchmark credit score is breached, ICRA gives a month's time to the debt fund manager to bring the portfolio credit score within the benchmark credit score. If the debt fund manager is able to reduce the portfolio credit score within the benchmark credit score, the rating is retained. If the portfolio still continues to breach the benchmark credit score, the rating is revised to reflect the change in credit quality. The ratings should, however, not be construed as an indication of the prospective performance of the Mutual fund scheme or of volatility in its returns. ICRA ratings should not be treated as recommendation to buy, sell or hold the rated debt instruments. ICRA ratings are subject to a process of surveillance which may lead to a revision in ratings. **Source:** ICRA Ltd.
